MILLER & KREISEL SOUND
PRODUCT INFORMATION SHEET

Powered Subwoofer

The Choice Of Professionals™

For over 30 years, M&K monitors have enjoyed an unchallenged reputation as the world's finest loudspeakers, delivering the highest levels of performance to both consumers and professionals. Hundreds of professional film, broadcast, music, and postproduction rooms are equipped with M&K monitors for their audio production work.

Don't you want to hear your favorite films and music recordings on the same speakers that were used to produce them?

VX-760 Powered Subwoofer

From the world's leader in subwoofer performance, the VX-760 Deep Bass Powered Subwoofer is an M&K thoroughbred, giving you the audible superiority you expect from M&K at a remarkably affordable price in an incredibly compact size. Whether you need high output levels for exciting home theater performance or the articulation and clarity necessary for true musical enjoyment, the VX-760 delivers.

In a very small (15" cube) package, the VX-760 subwoofer gives you an incredible output capability. This remarkably tight and musical-sounding subwoofer uses the same high-performance 12" long-throw subwoofer driver as M&K's reference MX series powered subwoofers. M&K's sealed-box Deep Bass design gives listeners a very quick and articulate response, with clean output at high levels down to frequencies below 20 Hz.

A brand-new all-discrete amplifier design features exceptional sonics, with a conservative power rating of 150 watts continuous output. M&K's Headroom Maximizer™ circuit ensures that performance exceeds that of other single driver subwoofers in its class. This unique circuit insures maximum output and full signal dynamics while preventing amplifier clipping and audible distress. The VX-760 achieves the most musical performance in its class along with maximum output and dynamic range for home theater.

To facilitate connection to any system, the VX-760 has inputs and outputs for both line-level signals (such as from A/V receivers) and speaker level signals (from stereo receivers). Controls allow you to set the subwoofer's bass level as well as its upper rolloff frequency (between 40 and 200Hz, with a bypass for home theater receivers). You also have a 2-position switch for easy matching of subwoofer and main speaker phase, plus an auto turn-on circuit that includes an on/off switch, and a detachable power cord. The subwoofer is magnetically shielded, allowing placement near sensitive CRT televisions.

M&K's Legendary Quality Control

The VX-760 benefits from M&K's legendary quality control system. Unlike manufacturers that test only a small percentage of their speakers, each and every M&K speaker must pass the same battery of tests as our professional studio monitors. Our quality control team, using the world's most advanced test equipment, carefully measures and listens to 100% of all the loudspeakers we produce, verifying that they meet the industry's highest technical and aesthetic standards.

Driver:	12" long-throw treated-paper subwoofer driver
Internal Amplifier:	150 watt continuous all-discrete power amplifier with M&K Dynamic Headroom Maximizer™ circuit
Features:	Magnetically shielded Line-level and speaker level inputs and outputs M&K Sealed-box Deep Bass Design
Limited Warranty:	Speaker Driver - 10 years parts and labor Amplifier & Power Supply - 5 years parts and labor

SPECIFICATIONS

Model:	VX-760
Rated Power:	150 watts RMS
Finish Options:	Black with Black Cloth Grille
Frequency Response:	20Hz - 200 Hz ±3dB
Low Pass Filter:	Variable 40Hz-200Hz with Bypass
Phase:	0°/180°
Dimensions (HxWxD):	15" x 15" x 17-1/4" 38.1 x 38.1 x 43.8 (cm)
Weight:	45 lbs./ 20.4 kg.
MSRP:	Please Contact An Authorized M&K Dealer or send an e-mail to: support@mksound.com

10/5 YEAR limited WARRANTY
